

Welcome to HikaSerial

HikaSerial is a *Joomla!* component for the e-commerce solution *HikaShop*. It adds some new features that enable the assignment of unique data when a product is bought.

The goal of HikaSerial is to attach "serials packs" to HikaShop products and when a customer buys a product, some "serials" from the "pack" is attached to his order.

Why HikaSerial ?

Several times, in the HikaShop's forum, people have asked for a new feature in order to sell some "codes" in their store : Activation code, software license, seat number, SIM number...

HikaSerial is an answer to this kind of request and provides an administration interface to manage serials and packs.

What is a Serial ?

A serial is a **unique data item** in a database.

When a serial is assigned to an order, its data is added in the content of the email and is accessible in the front end by the user.

In the database, it is possible to store any kind of text you want. It could be a simple small number or a big piece of text.

Thanks to the plugin system, a serial could be more than some text.

It is possible to use an HikaSerial plugin to generate an image and to store the path of this image in the serial data.

When the serial is displayed in the email or in the front end, the same plugin could override the serial display and display some HTML instead.

A **pack** is a collection of serials. When you want to use HikaSerial with HikaShop, you should assign a pack to a product.

So when a product is bought by a user, HikaSerial will retrieve a serial from the pack and assign it to the HikaShop order.

A product can have several serials from the same pack (and you can configure the quantity) and maybe have several packs too.

Serial statuses

Free - The serial can be assigned to a customer.

Reserved - The serial is reserved for a specific customer.

Assigned - The serial is assigned to a customer, he can "consume" it.

Used - The serial is assigned to a customer and he has "consume" it.

Unassigned - The serial was assigned. It can be reassigned to the same customer.

Deleted - The serial is deleted.

Serial **usage** possibilities

Directly with HikaSerial:

- Activation code
- Software license
- Seat number, e-ticket
- SIM number
- Gift certificate
- Text, Article, poem, etc

With HikaSerial (custom) plugins:

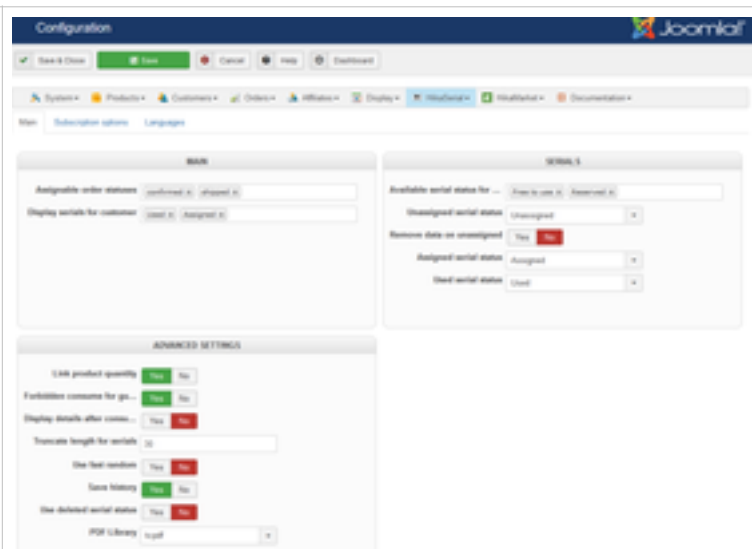

- HikaShop coupon generation
- Dynamic generation of serials
- Unique file attachment
- External serial generation (using web-services or other)
- Use HikaShop custom fields

Getting Started with HikaSerial

If **this** is the first time you use HikaSerial, we recommend you to have a look at the [configuration](#) and after that, to create your first [pack](#).

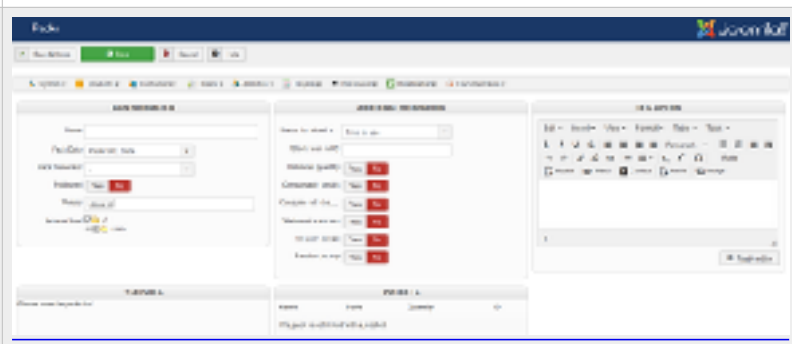

After **you have created your** pack, you **will** be able to associate this pack **with** a HikaShop product.

[HikaSerial configuration](#)

The screenshot shows the Joomla! Configuration page for HikaSerial. It is divided into three main sections: BASIC, SERIALS, and ADVANCED SETTINGS. The BASIC section includes fields for 'Assignable order statuses' and 'Display serials for customer'. The SERIALS section includes 'Available serial status for...' and 'Unassigned serial status'. The ADVANCED SETTINGS section includes various toggle options like 'Use product quantity', 'Forbid sales on sale', and 'Display details after purchase'.

[Pack edition](#)

The screenshot shows the Joomla! Pack edition page. It includes a 'SAVE PACK' section with fields for 'Name', 'Pack ID', and 'Status'. There is also a 'PACK SERIALS' section with a table for managing individual serials, including columns for 'Name', 'Price', 'Quantity', and 'Status'.

[HikaShop product interface for HikaSerial association](#)

In the HikaShop product interface, a new block "Serials" is displayed. Here, you can packs to the product.
