### Joomla! Debug Console

At this point, I cannot click "Registration" or "Guest" in order to change the information. I am able to Login as an existing user or click the "Next" button. I am not able to do anything else.

# Checkout Configuration is:

The screenshot displays the Joomla! Configuration interface for the Checkout Workflow. The interface is organized into several sections:

- System:** Includes navigation menus for System, Products, Customers, Orders, Display, and Documentation. A breadcrumb trail shows: Main > Checkout > Display > Features > Advanced > Languages > Access level > Cron.
- CHECKOUT WORKFLOW:**
  - Step 1:** Configures the initial cart and login options. It includes a 'Cart' section with settings for 'Read only', 'Show message', 'Link to the product page', 'Display product code', 'Display price', 'Price with tax', and 'Show delete icons in the cart'. A 'Login' section includes 'Show submit button', 'Ask address on registration', 'Show 'same address' checkbox', and 'Same address checkbox pre-checked'. A 'New view' section is highlighted in green, showing a 'Login' dropdown and an 'Add view' button.
  - Step 2:** Configures fields, address, coupon, shipping, terms and conditions, payment, and status. The 'Address' section includes 'Address selector', 'Type' (Billing, Shipping, Both), 'Show 'same address' checkbox', and 'Allow multiple addresses'. The 'Shipping' section includes 'Read only', 'Show title', 'Multiple group product display', and 'Selector type'. The 'Terms and Conditions' section includes 'Terms and Conditions', 'Terms & Conditions popup size', and 'Label'. The 'Payment' section includes 'Read only', 'Show title', and 'Selector type'. The 'Status' section is currently empty.
  - Step 3:** A simple 'End' step with an 'Add step' button.
- CHECKOUT:** Global checkout settings including 'Force a menu on the checkout', 'Force SSL on checkout', 'Continue shopping button's URL', and 'Display checkout progress bar'.
- ADDRESS & SHIPPING:** Includes an 'Address format' field with a code snippet: 

```
{address_company}
{address_line} {address_firstname} {address_lastname}
{address_street}
{address_post_code} {address_city} {address_state}
{address_country}
?{ip_echo}
?{ip_append:TELEPHONE_IN_ADDRESS:}{address_telephone}?>
```
- LOGIN & REGISTRATION:** Global settings for user authentication, including 'Login', 'Display method for registration', 'Default registration view', 'Registration' options, 'Display email confirmation field', 'Ask address on registration', 'User group on registration', 'Allow registration after guest checkout', and 'Log IP address'.

The bottom of the interface shows a status bar with '2 Built Active', 'Joomla! 3.9.20', and copyright information for '© 2020 Test Online Fampgale Butcher & Adisan Parity'.

Expected Result:

I expect that when I return to the Login / Registration / Guest page, I could click on "Guest" to see the full Guest information and be able to update it.
